

A TEC, a member of the Loesche Group, is one of the leading specialists in the field of pyroprocess optimization in the cement industry. Our innovative technologies help our customers to minimize production costs and reduce emissions. With headquarters in Austria and subsidiaries as well as representations in other countries, we have a global presence. To strengthen our team, we are looking for an:

Head of Quality Assurance and Development (m/f)

We seek an ambitious analytical chemistry with experience as a Lab Technician in the cement industry for working in Angola.

Team workability, readiness to learn and develop as well as a expertise in our industry and a profound knowledge in English and Portuguese is required. A willingness to travel and to live abroad is essential.

Your responsibilities:

- You define and implement the quality criteria and standards for cement in compliance with relevant standards and guidelines, as well as legal requirements
- You ensure comprehensive support and advice on production in all quality issues
- You lead, motivate and ensure further development of the subordinate employees and you make decisions on individual personnel actions in the area of your responsibility
- You are responsible for ensuring and coordinating regular product testing and quality control
- You ensure the evaluation and analysis of the relevant quality data and initiate necessary corrective measures in case of differences in coordination with the product manager
- You support the sale to existing customers and work towards the acquisition of new customers as well
- You are responsible for new product developments and product modifications .
- Technical background for instruments operation, like XRF (X-Ray Fluorescence) with calibration theory.
- Responsible for staffing laboratory personnel and ensuring proper training of any personnel that will be involved in sampling and testing.
- Ensure the accuracy of all equipment used in the quality control and assurance functions.

Your profile:

- Degree in analytical chemistry or equal education (focus on inorganics)
- Experience at least 5 years in quarry, cement or building material analysis
- Knowledge of cement clinker and cement standards
- Willing to work abroad in an international team
- Language skills: English and Portuguese (mandatory)

Are you interested in being a part of our team and supporting our position in the worldwide cement pyroprocess industry? We offer a motivated working group, the possibility of international travel, flexible working hours and development chances.
